

Helping you unlock the value of OEM remanufactured parts

When you use OEM remanufactured parts, you're making sure your engine functions at the highest level of performance.

UPTIME

More uptime means better production. And better production means more profitability. That's why OEM remanufactured parts are not just rebuilt. They're reengineered to work effectively with other genuine engine parts to increase performance, decrease wear and reduce failure risk.

DISTRIBUTION

With part exchange offered by a local OEM-authorized Channel Partner, you'll have access to the assets you need – when you need them.

IMPROVED SUSTAINABILITY

Remanufactured parts can deliver ever-increasing efficiencies and energy savings for exceptional performance while reducing environmental impact. Add to that a reduction in your operation's environmental impact with returnable (and reusable) crates.

COST SAVINGS

Remanufactured OEM parts can optimize your ROI by helping ensure your engine is working longer and better. This holistic approach to engine operation means greater overall performance and lower costs in the long run.

COMPLETE COVERAGE

Genuine OEM remanufactured parts can help you protect your operational investment with a warranty* that covers progressive engine damage as a result of the warranted defect.

*Based on warranty limitations as stipulated in ELW 4503.

RELIABILITY

Unlike alternative parts, all OEM remanufactured parts are tested to original-or-better-than specifications and are designed to withstand severe conditions.
